

## On the Conformal Representation of Plane Curves Particularly for the Cases $P = 4$ , 5, and 6 (Classic Reprint)

Filesize: 5.5 MB

### **Reviews**

*Very useful for all group of people. It is amongst the most incredible pdf i actually have read through. Its been written in an extremely straightforward way and it is just right after i finished reading through this pdf by which basically modified me, change the way i think. (Felicia Nikolaus)*

## ON THE CONFORMAL REPRESENTATION OF PLANE CURVES PARTICULARLY FOR THE CASES $P = 4, 5,$ AND 6 (CLASSIC REPRINT)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from On the Conformal Representation of Plane Curves Particularly for the Cases  $P = 4, 5,$  and 6 In order to do this we must classify surfaces according to their deficiencies and treat each class separately. In the case  $p=0$  there are no cuts on the surface and no integrals of the first kind. Integrals of the second kind exist on all surfaces. Let us select one of these,  $w$ , which has a single algebraic infinity. The function  $w$  being of weight one assumes one and only one value corresponding to each point of the  $n$ -leaved surface  $F(x, y) = 0$ . These values, real and complex, may be represented by the points in a plane by the ordinary representation of complex numbers. The given  $n$ -leaved surface can then be conformally represented upon a plane by means of the real and complex values assumed by  $w$ . If  $p = 1$  two cuts are required to make the surface simply connected. We know that on any surface of deficiency  $p$ , there exist  $p$  linearly independent integrals of the first kind. Here then there exists only one which we will call  $u$ . Let the periods across the cuts be  $w_1$  and  $w_2$  If  $u$  has the value  $u_0$  at a given point, for all the region around containing no branch point the  $u$  will vary continuously, and since  $u$  can be nowhere infinite, and since its values may be represented by points of a plane just as any complex number is represented, these points must all be within a parallelogram whose boundaries are determined by the limits of the values of the real and imaginary parts of  $u$ ...
