Excerpt from A Contribution to Our Knowledge of Organic Sulphur Compounds in the Field of Animal Chemistry The phosphines, too, are excluded, for, being basic substances, they would be held back by the hydrochloric acid. Then, too, the phosphines are very readily oxidized, and in small amounts could not be made to bubble up through so many wash bottles without being destroyed by this long contact with the air. A long series of experiments was, in fact, undertaken to determine whether or not a volatile phosphorus compound was present along with. The sulphur compound before it was washed, but all with negative results. It therefore seemed fair to assume that our sulphur compound was the only substance carried by the air through the series of wash bottles, and all the subsequent experiments made to establish its identity furnish additional support for this assumption.
