REGULATION OF THE EXCHANGE ACTIVITY OF DBL-FAMILY PROTEINS

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Auto-inhibition, intermolecular interactions and phosphorylation in the regulation of Dbl-family proteins | Dbl-related oncoproteins are guanine nucleotide exchange factors (GEFs) specific for Rho-family GTPases and typically possess tandem Dbl (DH) and pleckstrin homology (PH) domains that act in concert to catalyze exchange. The exchange activities of many Dbl-proteins are regulated by phosphorylation or constitutively activated by truncations preceding their DH domains. However, exact mechanisms of regulation remain poorly understood. The current literature regarding the activation and inhibition of the exchange activity of...

Reviews

This pdf can be worthy of a study, and a lot better than other. I am quite late in start reading this one, but better then never. You wont truly feel monotony at at any moment of your respective time (that's what catalogues are for regarding in the event you check with me).
