Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from On Diseases of the Spine Before proceeding to cope with the intricate and difficult pathological topics which form the subject of the present article, it appears to be expedient to glance at some points in the physiology of the spinal cord, and also to try and ascertain the true significance of pain, spasm, and certain symptoms analogous to pain and spasm, which figure conspicuously in the histories of spinal maladies; for if these matters be not disposed of as preliminaries now, they will prove to be the cause of frequent and distracting digressions afterwards. 1. A glance at some points in the physiology of the spinal cord.-The result of recent researches has been to establish in the fullest manner the truth of Sir Charles Bell's great discovery, that the posterior roots of the spinal nerves are devoted to sensation only, and the anterior roots to motion only. In one article, at least, the creed of to-day is the same as that of yesterday; and it is some comfort to have it so, for in many other articles faith is not a little shaken by the changes of belief which are now found to be necessary. The view once held that the posterior columns of the spinal cord are made up of bundles of fibres passing from the posterior roots of the spinal nerves to the sensorium has proved to be untenable. Transverse division of these columns produces in the parts behind the section, not numbness, as it would do if these columns were simply the continuation of the posterior roots of the spinal nerves, but hypersesthesia; and the pain resulting from the section is...
