Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | A Bio-Inspired, Agent-Based Framework and its Application to Pervasive Platforms Programming | Ubiquitous Computing is the emerging trend in computing systems. Based on this observation this thesis proposes an analysis of the hardware and environmental constraints that rule pervasive platforms. These constraints have a strong impact on the programming of such platforms. Therefore solutions are proposed to facilitate this programming both at the platform and node levels. The first contribution presented in this book proposes a combination of agent-oriented programming with the principles of bio-inspiration (Phylogenesis, Ontogenesis and Epigenesis) to program pervasive platforms such as the Perplexus platform. The second contribution proposes a method to program efficiently parallelizable applications on each computing node of this platform. | Format: Paperback | Language/Sprache: english | 212 pp.
