Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 edition. Excerpt: . . . in the mouth or about the lips, he should immediately try to remove the poison by suction, which is probably the safest thing that can be done. He should then soak the part in a formaldehyde disinfectant and as soon as possible cauterize the wound. For this purpose use nitrate of silver or carbolic acid. Chapter XI. CHEMISTRY OF THE BODY. In this chapter it is not intended to attempt more than a glance at such facts in chemistry as may be of interest to the embalmer, and to adduce and simplify such points as it is important, or at least expedient, that he should be familiar with. With this end in view, it is thought well to begin with a few commonplace definitions. Chemistry is that science which treats of atoms and molecules, and teaches those rules which govern their changes and combinations. An atom is an ultimate unit of matter, that which cannot be divided further. A molecule is the smallest quantity of any material substance which can exist uncombined. . Organic chemistry treats of carbon and its compounds, particularly of cells and their structure. Cells are the minute masses of protoplasm, usually with cell walls and nucleated, which enter into structure, and on which form, shape and consistence depend. Life is that form of energy on which all the phenomena exhibited by organized beings depend, from the protoplasm, or first vitalized essence, to the highly elaborated and extremely complicated animal body....
