### **Reviews**

*It is one of the best publications. It is really very intriguing through reading through periods of time. You will not feel monotony at any time of your own time (that's what catalogs are for relating to in the event you request me).*

**TOMOGRAPHY OF THE EARTH'S CRUST: FROM GEOPHYSICAL SOUNDING TO REAL-TIME MONITORING****DOWNLOAD**

Springer-Verlag GmbH Feb 2014, 2014. Buch. Book Condition: Neu. 244x4x20 mm. Neuware - The research work on the topic of "Tomography of the Earth's Crust: From Geophysical Sounding to Real-Time Monitoring" has focused on the development of cross-scale multiparameter methods and their technological application together with the development of innovative field techniques. Seismic wave field inversion theory, diffusion and potential methods were developed and optimized with respect to cost and benefit aspects. This volume summarizes the scientific results of nine interdisciplinary joint projects funded by the German Federal Ministry of Education and Research in the framework of the Research and Development Program GEOTECHNOLOGIEN. Highlights and innovations presented cover many length scales and involve targets ranging from applications in the laboratory, to ground water surveys of heterogeneous aquifer, geotechnical applications like tunnel excavation, coal mine and CO2 monitoring and the imaging and monitoring of tectonic and societally relevant objects as active faults and volcanoes. To study these objects, the authors use the full spectrum of geophysical methods (ultrasonics, seismic and seismology, electromagnetics, gravity, and airborne) in combination with new methods like seismic interferometry, diffuse wave field theory and full-wave-form inversion in 3D and partially also in 4D.
