This pdf might be well worth a study, and a lot better than other. It really is simplistic but excitement inside the fifty percent in the book. Its been printed in an exceedingly straightforward way which is just after i finished reading this ebook through which really modified me, modify the way i believe.

Original publisher: Hampton, Va. : NASA Langley Research Center, 1991 OCLC Number: (OCoLC)60362636 Excerpt: . . . 13 similar situation exists with the maneuversegment for this case which has 55 measurementsabove 4o, of which 46 are positive and contained within four peaks. The probability of occurrence of values above 40 for a randomnormal distribution is only 6×10^{-5} , or one value in the 22, 400 measurementscompared with a total of 98 for this case. Analysis of Noise Vibration Effects The noise level on the rate gyro data is about 4 to 6 percent of the measured signal and appears to be random. However, the noise level in the accelerometer data is of the same order as the rotationally induced acceleration and frequently exceeds 50×10^{-6} g. Figure 21 shows the X-channel accelerometer output for an expanded time scale which depicts the variations more clearly than does figure 5. The signal does not exhibit the characteristics of random noise but rather reflects the expected orbiter structural vibration characteristics; e. g. , a composite waveform produced by several vibration sources such as motors, pumps, and directional antenna systems. A fast Fourier transform routine was used to determine the power spectral density in the accelerometer output for each of the data segments as shown in figures 22-27. The sample size for this routine was 8192 (213), reduced from the segment size of 11, 200, and therefore covers only 73 seconds of the 100-second segments. Noticeable differences between the spectra are seen when comparing the pre-maneuver and maneuver segments for maneuvers 1 and 3 in both X-and Z-channels. For example, the pre-maneuver sequence during maneuver 3 for the X-channel (figure 24 (a)) shows much lower amplitudes...
