Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Stigmonose: A Disease of Carnations and Other Pinks In addition to the above description, these translucent dots may be divided into three classes, representing three forms of the disease, which differ slightly from each other in general appearance and behavior. The first and most common form corresponds with the above description. The translucent dots increase more or less rapidly, according to the age of the leaf, until finally they reach a diameter of one to several milli meters, and Often coalesce. The second form is characterized by the appearance of very small spots, scarcely visible to the naked eye, but easily detected when the leaf is held up to the light and examined with an ordinary hand lens. These small Spots are exceedingly numerous, but in their further development, even on young leaves, scarcely ever reach a diameter of more than half a millimeter. The third form resembles the first in extent of development, but instead of being round, the spots are elongated and irregular, and the affected plants more or less distorted. Dr. Arthur said that in his earlier study...
