

Approximation of Time Optimal Control for Unknwon Nonlinear Systems by Learning, Schriftenreihe Advances in Mechatronics,

Filesize: 1020.93 KB

Reviews

A very awesome ebook with perfect and lucid information. It is really simplified but unexpected situations in the 50 % of your pdf. I am pleased to let you know that here is the greatest book i have study inside my very own lifestyle and can be he greatest ebook for at any time.

(Noah Bruen)

APPROXIMATION OF TIME OPTIMAL CONTROL FOR UNKNWON NONLINEAR SYSTEMS BY LEARNING, SCHRIFTENREIHE ADVANCES IN MECHATRONICS,**DOWNLOAD**

Trauner Verlag Sep 2015, 2015. Taschenbuch. Condition: Neu. Neuware - The evolution in the field of actuators has led to very powerful and smart drives, combining mechanics with electronic and informatics, which require a suitable control to exploit potential advantages. A common requirement for actuators is time optimality, and thus it is sensible to look for time optimal control strategies. For known systems time optimal control can be formulated using standard methods. Unfortunately, in rare cases the problem is convex and thus requires the use of numerical methods, which may lead to local optima. Against this background, this work, started in the framework of an industrial project, presents a method to obtain an approximation of the time optimal control by iterative learning. The method itself consist of two learning loops, one based on the convergence of learning iterations enforcing the tracking of a specified trajectory, the other one adapting the trajectory to obtain a time (sub)optimal solution. To evaluate the me-thod, two examples are presented a compressor valve actuator and the steepest ascent of an aircraft. 148 pp. Englisch.
