Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Improvement of Pastures in Eastern New York and the New England States The dairy pastures in the region referred to have depreciated very greatly, and in many instances to the extent that they have very little value. In direct contrast there are numerous beef-cattle pastures in Kentucky, Tennessee, and Virginia of the same age that are fully as productive as ever, and are valued at \$100 or more an acre, even when located 20 to 30 miles from a railroad. In the northwestern part of Middlesex County, Ontario, there is an area of nearly acres that the farmers, owing to scarcity of labor, have rented to cattle grazers for fattening export cattle. After twenty years use practically all of these pastures are as good as ever, and in many instances have actually improved. Care is taken that these pastures shall not be overgrazed. If such pastures show any tendency to depreciation, steps, such as feeding roughage on the high points during the winter season to add to the fertility, the application of lime and bone meal, and other means that may be considered necessary, are immediately taken to restore them. All weeds that are likely to prove dangerous are carefully kept out. In the corn belt men buy badly worn land for \$25 an acre, and by putting it into pastures and feeding cattle on it are able to build up this land so that in from five to ten years it is worth from \$100 to \$125 an acre.
