

Convolutional LSTM for Next Frame Prediction

By Adler, Thomas

Condition: New. Publisher/Verlag: AV Akademikerverlag | Long Short-Term Memory (LSTM) is the most successful neural network architecture for processing time series data. Convolutional Neural Networks (CNNs) are outstanding in many image processing tasks like e.g. object detection. Since videos are nothing else but time series of images, it is tempting to use an architecture that combines these two concepts. The Convolutional LSTM (ConvLSTM) realizes this combination and is therefore a very natural architecture to use for the next frame prediction task, whose goal is to make a prediction for the next upcoming frames in a video sequence, i.e. predicting the future in a movie. In this work, new ways of training state of the art ConvLSTM neural networks for next frame prediction are introduced and explored. | Format: Paperback | Language/Sprache: english | 121 gr | 220x150x4 mm | 68 pp.

Reviews

If you need to adding benefit, a must buy book. I could comprehended every thing out of this composed e pdf. I am just very happy to tell you that this is the greatest pdf i have study inside my individual existence and could be he finest publication for at any time.

-- Miss Laurie Waters IV

Most of these publication is the greatest publication offered. It is actually rally intriguing through reading period of time. You can expect to like just how the article writer create this publication.
