WIND ENERGY. ELECTRON JET GENERATORS AND PROPULSIONS (PAPERBACK)

Lulu.com, United States, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. In given book considered the topics: utilization wind energy at high altitude, transfer of energy from airborne wind turbines to ground surface, new non turbine electron wind and water electric generators and propulsion system. Author offers a new method of getting electric energy from wind. A special injector injects electrons into the atmosphere. Wind picks up the electrons and moves them in the direction of wind which is also against the direction of electric field. At some distance from injector a unique grid acquires the electrons, thus charging and producing electricity. Author offers a new high efficiency propulsion non turbine system using electrons for acceleration of the craft. As this system does not heat the air, it does not have the heating limitations of conventional air ramjet hypersonic engines. Offered engine can produce a thrust from a zero flight speed up to the desired escape velocity for space launch. It can work in any planet atmosphere (gas, liquid) and at high altitude.
