

## A New Microscale Model for the Description of Crystallization of Semi-Chrystalline Thermoplastics

Filesize: 8.05 MB

### **Reviews**

*This written publication is fantastic. This can be for anyone who statte that there had not been a well worth reading through. I realized this pdf from my i and dad recommended this publication to discover.*

## A NEW MICROSCALE MODEL FOR THE DESCRIPTION OF CRYSTALLIZATION OF SEMI-CRYSTALLINE THERMOPLASTICS

[DOWNLOAD PDF](#)

Verlagsgruppe Mainz Jun 2017, 2017. Taschenbuch. Condition: Neu. Neuware - In many industrial sectors, plastics are among the most important materials these days, because the large variety of different polymers enables a target-oriented selection of materials for almost every application. The material-specific properties can be used specifically to meet the component requirements. In times of rising demands on the part properties and complexity, it is therefore of great importance to know the final material properties as early and accurately as possible using new simulation approaches. For semi-crystalline materials, this requires new multiscale approaches, which take into account the crystalline superstructures. The aim of the presented work is the definition, implementation and validation of a new crystallization model for the time-resolved calculation of the solidification process in semi-crystalline thermoplastic melts at the microscale. Thereby, the boundary conditions, which are put on the melt during the manufacturing process, are taken into account. Following the concept of nucleation and growth, a nucleation model is derived from the formalism of Ziabicki. In contrast to Ziabicki's work the Gibbs free energy is kept as model parameter as long as possible, because it can be used to introduce the influence of the manufacturing process in the model description. To map the non-linear viscoelastic behaviour of plastic melts, relaxation functions based on the reptation theory are used. The event-based realization of the model is presented together with the required numerical methods. A verification of the crystallization model takes place in the context of application examples for the injection moulding process. For this, the software package is used in multiscale simulation chains, in which a macroscale simulation of the manufacturing process provides the boundary conditions for the microstructure simulation. The calculated spherulite distributions are in good agreement with polarized light microscopy figures...
