

Strong and Weak Approximation of Semilinear Stochastic Evolution Equations

By Kruse, Raphael

Condition: New. Publisher/Verlag: Springer, Berlin | In this book we analyze the error caused by numerical schemes for the approximation of semilinear stochastic evolution equations (SEEq) in a Hilbert space-valued setting. The numerical schemes considered combine Galerkin finite element methods with Euler-type temporal approximations. Starting from a precise analysis of the spatio-temporal regularity of the mild solution to the SEEq, we derive and prove optimal error estimates of the strong error of convergence in the first part of the book. The second part deals with a new approach to the so-called weak error of convergence, which measures the distance between the law of the numerical solution and the law of the exact solution. This approach is based on Bismut's integration by parts formula and the Malliavin calculus for infinite dimensional stochastic processes. These techniques are developed and explained in a separate chapter, before the weak convergence is proven for linear SEEq. | Introduction.- Stochastic Evolution Equations in Hilbert Spaces.- Optimal Strong Error Estimates for Galerkin Finite Element Methods.- A Short Review of the Malliavin Calculus in Hilbert Spaces.- A Malliavin Calculus Approach to Weak Convergence.- Numerical Experiments.- Some Useful Variations of Gronwall's Lemma.- Results on Semigroups and their Infinitesimal...

A top quality publication along with the font used was intriguing to read. I really could comprehend everything using this written e-book. It's been designed in a remarkably straightforward way and it is only after I finished reading through this publication by which basically altered me, modify the way I believe.

-- Cathrine Larkin Sr.

Very useful to all of group of people. I actually have read through and so I am certain that I will planning to study yet again once again down the road. I am just very easily can get a satisfaction of looking at a created book.
