

High Resolution EPR

Filesize: 4.04 MB

Reviews

A whole new e book with a brand new standpoint. I have read through and i also am certain that i am going to planning to read again yet again later on. I found out this book from my i and dad advised this pdf to learn.

HIGH RESOLUTION EPR

Springer-Verlag Gmbh Jun 2009, 2009. Buch. Condition: Neu. Neuware - High Resolution EPR: Applications to Metalloenzymes and Metals in Medicine Prof. Graeme Hanson, University of Queensland and Prof. Lawrence Berliner, University of Denver Metalloproteins are involved in a variety of biologically important processes, including metal ion and oxygen transport, biosynthesis, electron transfer, biodegradation, drug metabolism, proteolysis and peptide hydrolysis, environmental oxygen, sulphur, and nitrogen cycles, and disease states. High-resolution EPR spectroscopy is crucial in determining the geometric and electronic structural characterization of the redox cofactors in metalloenzymes, which is essential for understanding their reactivity in complex biological systems. This volume, Part I of a two-volume set, covers high-resolution EPR methods, computer simulation, density functional theory, and their application to iron proteins, nickel, and copper enzymes and metals in medicine. The following chapters, written by experts in their fields, include: Advanced Pulse EPR Methods for the Characterization of Metalloproteins: Jeffrey Harmer, George Mitrikas, and Arthur Schweiger Probing Structural and Electronic Parameters in Randomly Oriented Metalloproteins by Orientation-Selective ENDOR Spectroscopy: Reinhard Kappl, Gerhard Bracic, and Jürgen Hüttermann Molecular Sophe: An Integrated Approach to the Structural Characterization of Metalloproteins: The Next Generation of Computer Simulation Software: Graeme Hanson, Christopher Noble, and Simon Benson Spin-Hamiltonian Parameters from First Principle Calculations: Theory and Application: Frank Neese EPR of Mononuclear Non-Heme Iron Proteins: Betty Gaffney Binuclear Non-Heme Iron Enzymes: Nata a Mitic, Gerhard Schenk, and Graeme Hanson Probing the Structure Function Relationship of Heme Proteins Using Multifrequency Pulse EPR Techniques: Sabine Van Doorslaer EPR Studies of the Chemical Dynamics of NO and Hemoglobin Interactions: Benjamin Luchsinger, Eric Walter, Lisa Lee, Jonathan Stamler, and David Singel EPR Investigation of [NiFe] Hydrogenases: Maurice van Gastel and Wolfgang Lubitz Unique Spectroscopic Features and Electronic Structures of Copper Proteins: Relation to Reactivity: Jungjoo Yoon and Edward Solomon Insulin-Enhancing Vanadium Pharmaceuticals: The...
