By Henriksen, Dick

Condition: New. Publisher/Verlag: Wiley-VCH | Self-Similarity of the Physical World | This book is a reference for scientists featuring examples of dimensions and scaling in different areas of natural sciences and mathematics. It discusses recent advances in the theoretical techniques of scaling and applications to almost any branch of quantitative science. | Bringing the concepts of dimensional analysis, self-similarity, and fractal dimensions together in a logical and self-contained manner, this book reveals the close links between modern theoretical physics and applied mathematics. The author focuses on the classic applications of self-similar solutions within astrophysical systems, with some general theory of self-similar solutions, so as to provide a framework for researchers to apply the principles across all scientific disciplines. He discusses recent advances in theoretical techniques of scaling while presenting a uniform technique that encompasses these developments, as well as applications to almost any branch of quantitative science. The result is an invaluable reference for active scientists, featuring examples of dimensions and scaling in condensed matter physics, astrophysics, fluid mechanics, and general relativity, as well as in mathematics and engineering. | Introduction Arbitrary Measures of the Physical World Lie Groups and Scaling Symmetry Poincaré Group Plus Rescaling Group Instructive Classic Problems Variations on Lie Selfsimilarity Explorations Renormalization Group and Noether...
