Wind Power: 15 Lessons How To Build Wind Power Generating System Generating electricity from the power of the wind is one of the cleanest and most environmentally friendly ways of producing electricity. It is also a viable option when you live in a particularly remote part of the country or you are keen to live off the grid. However, the idea of generating your own electricity can seem very difficult, dangerous and daunting. Fortunately, the opposite is true! The basic principles of generated electricity are simple and every bit of equipment you need can be made yourself or purchased; depending upon the amount of work you wish to undertake. A wind generator can create enough electricity to power your whole house although it is worth remembering that the wind does not always blow consistently. It is, therefore, essential to have a good range of batteries which can keep supplying power even if the wind has dropped completely. Despite this, wind generators generally have very light blades and slow moving motors which means that electricity can be generated in winds as light as seven or eight miles per hour. Providing you are not intending to connect your wind generated supply to the main grid you can complete all the work yourself. If you wish to connect to the grid you will need to comply with specific instructions regarding connections and who is able to complete them.
