Reviews

A top quality publication along with the font used was intriguing to read. I really could comprehend everything using this written ebook. Its been designed in an remarkably straightforward way and it is only after i finished reading through this publication by which basically altered me, modify the way i believe.

ADDITIONAL CONDENSATE RECOVERY UNIT OF INDIAN PETROLEUM INDUSTRY

LAP Lambert Academic Publishing Jul 2015, 2015. Taschenbuch. Book Condition: Neu. 220x150x5 mm. Neuware - Natural gas production contains low molecular weight hydrocarbon compounds; it include methane (CH₄), ethane (C₂H₆), propane (C₃H₈) and butane (C₄H₁₀). Although these hydrocarbons exist in a liquid state at underground pressures, they will become gaseous at normal atmospheric pressure, they are called natural gas liquids (NGLs). In the plant, contaminants are removed and the NGL hydrocarbons are recovered for other commercial uses. For economic reasons, some plants may be designed to yield an intermediate product typically containing over 90 per cent pure methane and smaller amounts of CO₂, and C₂H₆. This can be further processed in downstream plants or used as feedstock for chemicals manufacturing. ONGC aims at implementation of ACRU (Additional Condensate Recovery Unit) for removing these hydrocarbons from the gaseous stream coming from the Off Gas Compression-II (OGC-II) to make it more pure and moreover to regain the costly crude oil present in it. Condensate (crude oil) is a valuable resource and even the recovery of small quantities is often economically justifiable. The discharge from the gas stream is worth recovering. 84 pp. Englisch.
