A complete mastery of the branches taught is no longer regarded as an adequate preparation for the teacher s work. For true teaching not only guides the efforts of the pupil in acquiring knowledge, but incites the kind of efforts that contribute to his intellectual strength. This double purpose of genuine instruction demands a corresponding increase in the range of the teacher s attainments. His knowledge must embrace not simply the facts he teaches, but also the faculties he trains. He must know the mind with which he deals: its impulses; its spontaneities; its dominant activities, and the invariable order in which its powers are developed. Now, this knowledge of mind and its laws may be gained by a persistent self-scrutiny, which can be rightly guided and materially helped by a book judiciously prepared for the purpose. And such a book I have endeavored to write after studying and teaching, for some thirty years, the subjects of which it treats. Let me earnestly urge that you who read the Teacher s Psychology, apply its matter simply as an incentive to the study of your own mental operations.
