## Power management algorithms for wireless sensor networks

By Udenze, Adrian

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Wireless Sensor Networks (WSN) comprise of highly constrained nodes in terms of processing power, memory, size and most importantly, power is supplied by batteries that are not rechargeable or replaceable. In addition, the nodes have to be self configurable and autonomous thus requiring considerable intelligence. To this end, managing the limited resources of the nodes and the development of low foot print artificial intelligence based agents have been major areas of research. Power Management Algorithms for Wireless Sensor Networks is an in-depth study of artificial intelligence based techniques applicable to these highly constrained network nodes. The algorithms focus on two main areas of power wastage in WSN namely, the transceiver and media access. The author explores a number of environments in which the nodes operate and using sound theory for proof of optimality in combination with empirical work, develop agents that converge on policies that are optimal and able to operate in these highly constrained networks. This book is a major resource for those working in the field of resource management for intelligent autonomous self configuring low power sensor networks. | Format: Paperback | Language/Sprache: english | 288 pp.

### Reviews

*This book is definitely not simple to begin on studying but quite fun to see. I actually have read and that i am sure that i will gonna read through yet again once again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.*

-- Brennan Koelpin

*Comprehensive guide! Its this type of very good read through. It is actually writter in simple words and phrases rather than difficult to understand. It is extremely difficult to leave it before concluding, once you begin to read the book.*

-- Bernie Mante PhD
