Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Soil Conservation Survey Handbook Classes of land according to use capability are determined wholly on the basis of physical characteristics. Of the land, that is, of the soil and its climatic environment. At least four groups of factors must be considered: (1) Permanence of the soil if cultivated (susceptibility to erosion); (2) productivity of the soil as conditioned by native fertility, capacity for retention and movement of water, salt content, aeration, or other factors; (3) the presence of any factor that would interfere with cultivation, such as stoniness or a hardpan layer; and (4) the climatic environment, particularly temperature and precipitation. To aid in the determination of use capability a table (table 2, p. 21) should be prepared at the beginning of each survey or as soon thereafter as possible, showing significant variations in the physical factors (soil type, slope, and degree of erosion) such as govern land use capability within the prevailing climatic environment. This table is to be initiated by the chief of the survey party, developed in cooperation with local and regional technicians, and approved by cooperating agencies and by the regional conservator and the inspector. When properly completed, the recommendations for land use capability will, furnish the necessary physical information to serve as a definite basis, for soil conservation operations on the land. In those areas where detailed studies and surveys and work on the land have been carried out, sufficient information may be available to develop the table at the start of the survey. In all instances the table should be developed as rapidly as the information can be assembled, and completed before the survey is finished. After completion of the table...
