In September 2011, FCC discovered that it had experienced a security breach on its computer network, which potentially allowed sensitive information to be compromised. The commission initiated the ESN project to implement enhanced security controls and an improved network architecture to defend against cyber attacks and reduce the risk of a successful future attack. GAO was asked to assess the extent to which FCC has (1) effectively implemented appropriate information security controls for the initial components of the ESN project, and (2) implemented appropriate procedures to manage and oversee its ESN project. To do so, GAO determined the effectiveness of ESN security controls by evaluating control configurations and identifying management controls; and determined how FCC applied them to the ESN project by analyzing documentation and interviewing commission officials.
