In the early husbandry of this and other countries, the practice was to take as many crops of corn, varied occasionally with one of pulse, as could be grown in succession; after which the land got a years bare fallow, or was left a number of years under grass. The arable land was divided into two parts; one-third or one-fourth infield and the remainder outfield; the proportion of the former being determined by its proximity to the farm-yard, and the amount of dung produced there. The infield was arranged in three divisions, each of which was cropped successively with (1) wheat or barley; (2)...
