

Future Multimedia Networking

Filesize: 2 MB

Reviews

Extensive guideline! Its such a great go through. It is definitely basic but surprises in the 50 % of the pdf. It is extremely difficult to leave it before concluding, once you begin to read the book.

Condition: New. Publisher/Verlag: Springer, Berlin | Second International Workshop, FMN 2009, Coimbra, Portugal, June 22-23, 2009, Proceedings | It is our great pleasure to welcome you to the Second International Workshop on Future Multimedia Networking (FMN). Following the first successful workshop (held in Cardiff, Wales) in 2008, this year's workshop continues the tradition of being a premier forum that gives researchers and practitioners a unique opportunity to share their experiences and discuss state-of-the-art research results and major recent accomplishments in the area of multimedia networking. In recent years, real-time multimedia services have contributed extensively to our life experience and are expected to be among the most important applications in the future Internet. The management of content distribution services and the efficient delivery of real-time multimedia services over diverse and heterogeneous wired and wireless systems remain a significant challenge for future multimedia networking systems. This year's workshop focused on various aspects of multimedia systems, content networking, and autonomous communication. A specific emphasis was placed on upcoming autonomic content networks and technologies that contribute to their development. The call for papers attracted 64 submissions from 32 countries for the main workshop. The Program Committee accepted 16 papers (an acceptance rate of 25%) that cover a range of topics, including wireless and ad-hoc networks in autonomic content networking, streaming and voice services, group and multi-party services, and quality in video and Internet services. This year we also had a Demonstration Session on Future Multimedia Networking for which 12 papers were accepted out of submissions received from over 15 countries. It is our sincere hope that the proceedings of this workshop will serve as a valuable reference for multimedia researchers and developers. | Streaming and Voice Services in Future Multimedia Networks.- Enhancing TFRC for Video Streaming by Agnostically Using Applicative Cross Layer Semantics and Measure.- ILPS: A Scalable Multiple Description Coding Scheme for H.264.- Arrival Process-Controlled Adaptive Media Payout for Video Streaming.- A Multicast-Based Enterprise VoIP...
