The bite of the mosquito at an earlier period after contamination does not appear to confer any immunity against a subsequent attack. 5. Yellow fever can also be experimentally produced by subcutaneous injection of blood taken from the general circulation during the first and second days of the disease. 6. An attack of yellow fever produced by the bite of the mosquito confers immunity against the subsequent injection of the blood of an individual suffering from the nonexperimental form of this disease. 7. The period of incubation in 13 cases of experimental yellow fever has varied from 41 hours to 5 days and 17...
