

## The Nature of Unidentified Galactic High-Energy Gamma-Ray Sources

Filesize: 7.22 MB

### **Reviews**

*The most effective pdf i ever read. it absolutely was writtern extremely flawlessly and useful. I am very easily will get a pleasure of reading through a published book.*  
(Prof. Vidal Ledner)

## THE NATURE OF UNIDENTIFIED GALACTIC HIGH-ENERGY GAMMA-RAY SOURCES

[DOWNLOAD PDF](#)

Springer Okt 2001, 2001. Buch. Book Condition: Neu. 235x155x26 mm. This item is printed on demand - Print on Demand Neuware - The Energetic Gamma-Ray Experiment Telescope (EGRET) instrument on the Compton Gamma-Ray Observatory left as a legacy its Third Catalog of High Energy Gamma-Ray Sources, whose detections include a large number of blazars, some pulsars, the Large Magellanic Cloud and a solar flare. Most of the newly discovered objects - a majority of the catalog - are unidentified sources, with a clearly predominant Galactic population. Are all these radio-quiet pulsars, like Geminga, or is there a novel type of celestial object, awaiting identification In spite of the limited angular resolution provided by EGRET and COMPTEL, there is still much to learn about unidentified  $\gamma$ -ray sources: correlation studies, multiwavelength observations and theoretical work can provide valuable clues, specially if these efforts are carried out in a coordinated manner. The aim of this workshop, held from October 9 to 11, 2000, at the Instituto Nacional de Astrofísica, Óptica y Electrónica, at Tonantzintla, Mexico, was to gather experts on the subject, including observational astronomers specialized in other regions of the electromagnetic spectrum, in an effort to address the question of the Nature of Galactic high-energy gamma-ray sources, both from the theoretical and observational perspective, and elaborate schemes for future identification studies which can make use of existing and forthcoming facilities. 376 pp. Englisch.
