REPORT OF THE FAO EXPERT WORKSHOP ON THE APPLICATION OF BIOSECURITY MEASURES TO CONTROL SALMONELLA CONTAMINATION IN SUSTAINABLE AQUACULTURE, MANGALORE, INDIA, 19-21 JANUARY 2010 (PAPERBACK)

Food Agriculture Organization of the United Nations (Fao), Italy, 2010. Paperback. Condition: New. Language: English . Brand New Book. This document reviews the current scientific evidence regarding the pathogen *Salmonella enterica*, its occurrence and survival in aquatic environment, possible pathways of contamination of aquaculture systems, serovars found in seafood and salmonellosis associated with fish and fishery products. The experts recognised that there are a variety of pathways reported as to how *Salmonella* can enter the aquaculture environment ranging from wild animals, domestic stock, poor sanitation and inappropriate disposal of human and animal wastes. Control of such pathways poses major challenges such as land runoff during rains, control of wild animals in the farm environment. The experts agreed that good hygienic practices during aquaculture production and biosecurity measures can minimise but not eliminate *Salmonella* in products of aquaculture. This report contains a series of recommendations to the national governments, national competent authorities, aquaculture industry and FAO.
