

## Cylindropermopsin and Saxitoxin Biosynthesis

Filesize: 5.64 MB

### ***Reviews***

*This ebook is wonderful. Of course, it really is perform, nevertheless an interesting and amazing literature. Its been printed in an extremely straightforward way and it is simply after i finished reading this ebook where in fact changed me, modify the way i believe.*

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | The molecular genetics of two cyanobacterial alkaloids | The present study deals with the molecular genetics and biochemistry of two cyanobacterial toxins, cylindropermopsin and saxitoxin. The molecular phylogenies of three putative cylindropermopsin biosynthesis genes, encoding an amidinotransferase (aoaA), a non-ribosomal peptide synthetase (aoaB) and a polyketide synthase (aoaC) has been examined and functional modelling was carried out to gain insights into the mechanism of precursor recruitment in this pathway. An in vitro assay was developed to characterise biochemical requirements for saxitoxin biosynthesis, using enzyme extracts from *Cylindropermopsis raciborskii* T3. All biosynthesis enzymes were located in the cytosol. The effects of substrates and inhibitors on the in vitro biosynthesis of saxitoxin were examined and predictions made regarding enzymes that may be involved. These predictions were used in a degenerate PCR approach to identify the saxitoxin biosynthesis gene cluster in cyanobacteria. | Format: Paperback | Language/Sprache: english | 252 pp.
