

Weird Bugs (Paperback)

By Einstein Sisters

Elsevier Health Sciences, United Kingdom, 2016. Paperback. Condition: New. Language: English . Brand New Book. There are more than a million kinds of bugs on Earth! Some are so tiny you can hardly see them, but some can be very big! When the bombardier beetle is threatened, it shoots a boiling hot chemical spray from its bum. A giant weta can weigh as much as three mice. A Goliath beetle can lift a load that is 850 times heavier than its own weight. That's like a human lifting a jet plane. Tardigrades are tiny eight-legged creatures that are nearly indestructible. They can live in boiling water, in solid ice, deep in the ocean and in outer space where there is no air.
