Original publisher: West Lafayette, IN : Laboratory for Applications of Remote Sensing, Purdue University, 1990 OCLC Number: (GPO)apn1992-042724 Excerpt: . . . put to productive use for organic matter studies, more knowledge about how organic fractions influence soil reflectance in specific wavebands over the spectral range of HIRIS will be necessary. While it is well known that increasing soil organic matter content causes an overall decrease in soil reflectance, the effects of different levels of organic matter content, and of individual soil organic fractions, on soil reflectance in specific narrow wavebands are not completely understood. Many previous studies of soil organic matter reflectance relationships considered reflectance only in arbitrarily-chosen regions of the electromagnetic spectrum. Other research identified optimal bands for organic matter-reflectance studies based solely on statistical analysis of soil reflectance data, without consideration of the specific influences of mineral and organic soil materials on reflectance in the chosen bands. This study was designed to identify the important spectral bands in which reflectance data provide useful information about soil organic matter, basing band selection on the physical nature of the reflectance response as well as on...

### Reviews

*Without doubt, this is the very best job by any article writer. It typically does not cost too much. You are going to like just how the blogger write this pdf.*  
-- Jazmyn Beier II

*This book can be worth a read through, and far better than other. It can be written in easy phrases instead of confusing. You will not really feel monotony at any moment of your respective time (that's what catalogs are for concerning if you check with me).*
