RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 102 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1801 Excerpt: . . . i in the numerator, and  $2y^2$  in the denominator be neglected, and a struck out of every term, we have  $\frac{a^2y^2 - r^2y^2}{a^2 - r^2}$ , where  $r$  is the radius of the earth, and  $a$  the distance of the moon from the earth. (For besides the terms neglected bearing but a very small proportion to the rest, both numerator and denominator are diminished at the same time, consequently the value of the fraction must be very little altered). Again, if  $a^2$  and  $r^2$  be like,  $r^2$  neglected, the expression for the disturbing force becomes  $\frac{1}{a^2}$ ; which, though less accurate than the above, is much more simple, and turns out the very same that prole (for Stezvert has found prop. 6th, tract 4th, of his Tracts Physical and Mathematical, as will easily appear, by introducing our symbols into his conclusions, and c. Corollary L When the moon comes to K, the other end of the diameter MK, the disturbing force will become  $3a^2 \frac{y}{r^3}$ ;  $y$  being here negative. Hence half the sum of these two forces will be  $\frac{1}{a^2} + \frac{3y}{r^3}$ , and the difference  $\frac{1}{a^2} - \frac{3y}{r^3}$ . Hence the mean solar force determined above, and the force of the moon to the earth, is easily determined. Let  $p$  represent the...
