

A Practical Treatise on the Strength and Stiffness of Timber Intended as a Guide for Engineers, Architects, Carpenters . To Which Is Added an AB

Filesize: 3.81 MB

Reviews

I just started off reading this article ebook. It is actually written in basic words and not confusing. I am just very happy to let you know that this is the best ebook I actually have read through inside my individual daily life and can be the finest ebook for possibly.

A PRACTICAL TREATISE ON THE STRENGTH AND STIFFNESS OF TIMBER INTENDED AS A GUIDE FOR ENGINEERS, ARCHITECTS, CARPENTERS . TO WHICH IS ADDED AN AB

To download **A Practical Treatise on the Strength and Stiffness of Timber Intended as a Guide for Engineers, Architects, Carpenters . To Which Is Added an AB** eBook, please follow the hyperlink under and save the ebook or get access to other information which might be relevant to A PRACTICAL TREATISE ON THE STRENGTH AND STIFFNESS OF TIMBER INTENDED AS A GUIDE FOR ENGINEERS, ARCHITECTS, CARPENTERS . TO WHICH IS ADDED AN AB book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 26 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1833 edition. Excerpt: . . . pounds, at a point 16 feet from one support, and 4 feet from the other; and half the weight of a beam of these dimensions is 141 pounds; therefore 3464--141 3323 pounds, the same as the load proposed. Problem XX. In the equation $mnw = 3ld^3$ there are given the diameter d , the length of bearing l , and the load w ; to find m and n , the segments of the length separately. Divide both sides of the equation by the given load, and we get but $m n$ by the nature of the question. Hence, by the rule at Problem VII. , we obtain for the segments of the length, the following expressions, viz. where m is the greater and n the lesser segment; from which the following practical rule is derived. Rule 36. Multiply 125 times the length of bearing in feet, by the cube of the diameter in inches; divide the product by the given load, and subtract the quotient from the square of the length; then, to or from the length, add or subtract the square root of the remainder, and half the sum, or half the difference, will give the greater or lesser segment accordingly. Example 26. A cylindrical beam of oak 7 inches in diameter, and 20 feet in length, is found to sustain a load of 3323 pounds, including the effect produced by its own weight; at what point of the length is the load applied Here, by the...
