

## High Performance Mortars and Concretes Using Secondary Raw Materials

Filesize: 4.47 MB

### ***Reviews***

*Great e book and beneficial one. It is amongst the most awesome pdf i actually have read through. You wont feel monotony at at any time of your own time (that's what catalogs are for relating to if you request me).*  
*(Dorothy Daugherty)*

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Self-compacting cementitious systems | ACI defines HPC as the concrete that meets special performance and uniformity requirements that may not always be obtained using conventional ingredients, normal mixing procedures and typical curing practice. These requirements may include enhancement of ease of placement without segregation, long term mechanical properties, early age strength, toughness, volume stability and life in severe environments. Secondary raw materials (SRM) have a very significant role in determining the overall response of any modern concrete. The SRMs that were selected, included limestone powder, fly-ash, silica fume, amorphous rice husk ash and crystalline RHAP. The study looks into flow strength, microstructure and volume stability of SCCS in terms of linear early shrinkage measurements. It started with the SRM particle characterization. It has been demonstrated that amorphous rice husk ash could be used in place of silica fume, as SRM in modern concrete systems in developing agricultural countries | Format: Paperback | Language/Sprache: english | 215 gr | 152 pp.
