Forgotten Books, United States, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Nature of the Interfaces Existing in the Pores of Silica Gel and the Retention of Bromine by Silica Gels: Dissertation The following investigation was undertaken for the purpose of more definitely establishing the mechanism of the adsorption and retention of gases and liquids by silicic acid gels. It has been well established by Zsigmondy and his co-workers that the hydrate theory of silica gel is no longer tenable. In the absence of air he was able to measure the adsorption of alcohol and benzol. He obtained curves very similar to Van Bemmelen's curves for water. It does not seem possible that the gel structure should form even a loose combination with such a material as benzol. It was further shown that the dry gel only took up the various liquids in proportion to the existing free spaces. Zsigmondy's work thus leaves little basis for the theory of chemical union between the gel and the liquids taken up. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.](#)
