Excerpt: . drowning and asphyxia due to cardiac poisons, such as alcohol, chloral, and chloroform. It would also appear to be worthy of trial, in conjunction with artificial respiration, in the treatment of asphyxia neonatorum. Adrenalin represents more fully than other preparations the active properties of the suprarenal gland and has proved to be extremely valuable for alleviating congestion and checking hemorrhage. --Stevens: Modern Materia Medico and Therapeutics. Adrenalin is the name given to the active principle of the suprarenal gland; it has a most remarkable action--causes intense constriction of the peripheral vessels and so arrests bleeding. --Dixon: Manual of Pharmacology. Because of its extraordinary power to constrict bloodvessels Adrenalin is a remedy in all forms of hemorrhage. --Hare: Practical Therapeutics. Adrenalin Therapy. The literature of Adrenalin has grown to such an extent since its discovery in 1900 that it is simply out of the question, in a work of this kind, to give more than the most salient features of the reports. We have kept in mind the necessity of being concise in order to save our readers from a veritable inundation of details, which, however convincing they might be of the accuracy of the writers and the value of the drug employed, are rendered individually unnecessary by their very abundance. So many occasions present themselves in which a clearing of the field of observation is desired for diagnostic or surgical purposes; so many cases of organic and vascular atony suggest the use of...
