The ore at McIntyre is stated to be in immediate connexion with a primitive rock, the chief ingredient of which is Labrador feldspar. Two varieties of ore were received, accompanying the two kinds of iron, herein referred to. The first variety is of a granular but compact structure, colour of fresh fractures deep black, shining; that of weathered surfaces reddish brown, owing to the formation of a little peroxide; its specific gravity is 4.2322. The second variety has a compound structure, being in part amorphous and in part crystalline. The colour is a brownish black, except that of the crystalline portions, which is jet black. Its specific gravity it...
