Sample rate selection for the individual control loops of a SLC design follows the same guide fines used in single-rate sample rate compensator design: the sample rate for each SLC loop should be 5 to 20 times faster than the closed-loop bandwidth desired for that loop. See Franklin Powell and Workman 1990 for a discussion of sample rate selection for single-rate systems. 2. 4. 1. 2. Coupled Successive Loop Closures Structure The coupled SLC structure is the same as the traditional SLC structure except the designer can include cross feed terms which couple the fast and slow inputs and outputs of the design. In the state space formulation, cross coupling is represented by non-zero off diagonal terms in the compensator gain matrices. An example of a compensator structure with cross feed from the slow sampled sensor to the fast sampled updated control loop is given in Eqn. (2. 10). 0 Xslow (n 1...
