Not illustrated. 1908 Excerpt: . . . that of the first series, hence this remainder will also approach zero as a limit, and therefore either series will be convergent. 199. As explained in 120, when x is real, the symbol x denotes the numerical or absolute value of x; thus, --21 2 and 121 2. 200. We shall now consider the convergence of the geometric series 1 x . . . af1 . . . . By division, or by the theory of the sum of a geometric series, l-af 1 xn There are three cases to consider according as a;l, a;l, orar l. First, when a;l. In this case xn 0 as n becomes indefinitely great. The denominator, 1--x, is constant. There xn fore 0. Hence the limit of the sum of n terms as n 1--X. y becomes indefinitely great is----, which is a finite and--x determinate limit. Therefore by the definition of a convergent series, 195, the series is convergent. Second, when a. l. In this case xn becomes infinite as n becomes indefinitely great; and therefore the sum of n terms does not approach a finite limit, and therefore the series is divergent, by 195. Third, when x 1. In this case each term is unity and the sum of n terms becomes infinite as n becomes infinite, and the series is therefore divergent. When x --1 the sum of n terms is alternately 1 and 0, and therefore the sum of n terms does not approach a determinate...
