Condition: New. Publisher/Verlag: Wiley-VCH | Methods and Instruments | This first comprehensive review covers all atmospheric components and surface parameters, describing common methods to characterize aerosol particles and cloud/precipitation elements, while explaining radiation quantities and hyperspectral and active remote sensing techniques. | This first comprehensive review of airborne measurement principles covers all atmospheric components and surface parameters. It describes the common techniques to characterize aerosol particles and cloud/precipitation elements, while also explaining radiation quantities and pertinent hyperspectral and active remote sensing measurement techniques along the way. As a result, the major principles of operation are introduced and exemplified using specific instruments, treating both classic and emerging measurement techniques. The two editors head an international community of eminent scientists, all of them accepted and experienced specialists in their field, who help readers to understand specific problems related to airborne research, such as immanent uncertainties and limitations. They also provide guidance on the suitability of instruments to measure certain parameters and to select the correct type of device. While primarily intended for climate, geophysical and atmospheric researchers, its relevance to solar system objects makes this work equally appealing to astronomers studying atmospheres of solar system bodies with telescopes and space probes. | 1 Introduction 2 Thermodynamic and Dynamic Parameters 2.1 Introduction 2.2 Historical 2.3 Aircraft State Parameters 2.4 Static Air Pressure 2.5 Static Air Temperature 2.6 Water Vapor Measurements 2.7 Three Dimensional Wind Vector 2.8 Flux Measurements 2.9 Small Scale Turbulence 3 In Situ Trace Gas Measurements 3.1 Rationale and Historical Perspective 3.2 Introduction 3.3 Spectroscopic Techniques 3.4 Chemical Ionization Mass Spectrometry 3.5 Chemical Conversion Techniques 3.6 Whole Air Sampling and Chromatographic Techniques 4 In Situ Measurements of Aerosol Particles 4.1 Physical Characterization of Aerosol Particles 4.2 Aerosol Particle Number Concentration 4.3 Aerosol Particle Size Distribution 4.4 Aerosol Chemistry 4.5 Optical Properties of Aerosols 4.6 Cloud Condensation and Ice Nuclei 4.7 Challenges and Emerging Techniques 5 In Situ Measurements of Cloud and Precipitation Particles 5.1 Overview 5.2 Single Particle Size Distributions and...
