

The Ecofriendly Home (Hardback)

By Dan Phillips

HarperCollins Publishers, United Kingdom, 2000. Hardback. Condition: New. Language: N/A. Brand New Book. Initial chapters cover the principles of Western environmental architecture and Eastern design, the basics of using water, air, energy, light and space; and the materials and construction of walls, floors and windows. While there is advice on designing an environmentally friendly home, few readers are in a position to commission such a building so the majority of information enables them to work with what is already in existence. The Ecofriendly Home also looks at the needs of the different inhabitants and how home life can be made more pleasurable and efficient for each one. It recommends routines and products for cleaning, maintenance and the safeguarding of the home and its contents. Placed throughout the book are special features on products, materials and processes that have the greatest impact. There is also a comprehensive reference section detailing the composition, efficacy, uses of and effect on the environment of a vast range of materials.
