Focusing on the R software, the first section covers: * Basic elements of the R software and data processing * Clear, concise visualization of results, using simple and complex graphs * Programming basics: pre-defined and user-created functions The second section of the book presents R methods for a wide range of traditional statistical data processing techniques, including: * Regression methods * Analyses of variance and covariance * Classification methods * Exploratory multivariate analysis * Clustering methods * Hypothesis tests After a short presentation of the method, the book explicitly details the R command lines and gives commented results.
