

Sr1 3x/2CexTiO3 Based Ceramics

By Ganesanpotti, Subodh

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Crystal Symmetry and Dielectric Properties | This book provides a detailed introduction to the preparation and characterization of microwave dielectric materials. Dielectric and structural investigation on Sr1 3x/2CexTiO3 ($x=0.133$ to 0.4) based ceramics is also presented. These materials possess high permittivity varying from 113 to 180 and quality factor of 8000 to 11000 GHz at 2 GHz and relatively high temperature coefficient of resonant frequency (f). While no superlattice can be observed via x-ray diffraction or vibrational spectroscopy, both electron and neutron diffraction show evidence of a non-cubic super-cell caused by anti-phase tilting of oxygen octahedra. Pb substitution for Sr induces a ferroelectric transition. | Format: Paperback | Language/Sprache: english | 140 pp.

Reviews

Absolutely essential read publication. it absolutely was written very completely and valuable. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- Sarai Lebsack

Thorough guide for book enthusiasts. I am quite late in start reading this one, but better than never. Your lifestyle span will be transform when you total reading this article book.
