Reviews

This pdf might be well worth a study, and a lot better than other. It really is simplistic but excitement inside the fifty percent in the book. Its been printed in an exceedingly straightforward way which is just after i finished reading this ebook through which really modified me, modify the way i believe.

(Derick Brekke)

ATOMIC ENERGY LEVELS AS DERIVED FROM THE ANALYSES OF OPTICAL SPECTRA, VOL. 3: THE SPECTRA OF MOLYBDENUM, TECHNETIUM, RUTHENIUM, RHODIUM, PALLADIUM, SILVER, CADMIUM, INDIUM, TIN, ANTIMONY, TELLURIUM, IODINE, XENON, CESIUM, BARIUM, LANTHANUM-HAFNIUM, TANTAI.

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Atomic Energy Levels as Derived From the Analyses of Optical Spectra, Vol. 3: The Spectra of Molybdenum, Technetium, Ruthenium, Rhodium, Palladium, Silver, Cadmium, Indium, Tin, Antimony, Tellurium, Iodine, Xenon, Cesium, Barium, Lanthanum-Hafnium, Tantalum, Tungsten, Rhenium, Osmium, Iridium, Platinum, Gold, Mercury, Thallium The present Volume, including data to December 1957, is the third of a series being prepared at the National Bureau of Standards under a project on the compilation of atomic energy levels derived from the analyses of Optical spectra. Volume I, published in June 1949, contains the energy levels Of 206 spectra of the elements Hydrogen through Vanadium, Z 1 through 23. Volume II, completed in August 1952, includes similar data for 152 spectra of the elements Chromium through Niobium, Z: 24 through 41. Volume III covers the elements Molybdenum through Lanthanum, Z =42 through 57; and Hafnium through Actinium, Z=72 through 89. It includes 124 spectra, and is identical in arrangement with Volumes I and II. The form of presentation is that recommended by the majority of interested scientists who received a questionnaire proposed by the National Research Council Committee on Line Spectra of the Elements, when the program was started in 1946. The manuscript has been prepared by Charlotte E. Moore under the direction of William F. Meggers, Chief of the Spectroscopy Section of the Atomic and Radiation Physics Division. The success of this project has depended heavily upon the cordial and continuing collaboration of the many spectroscopists who have made an unusual effort to furnish data in advance of publication. Their efforts together with the unfailing cooperation of the National Research Council Committee are greatly appreciated. Perhaps the most difficult phase of this extensive program lies ahead. The...
