RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Original publisher: Washington, DC : National Aeronautics and Space Administration, 1992 OCLC Number: (OCoLC)645473355 Subject: Motherboards (Microcomputers) Excerpt: . . . LAR 14785-1-13-PATENT APPLICATION Figure 3 is a block diagram of a processing module 24, which is connected to RMU 1 through a read bus 25 and a write bus 26. The fiber optic cables of read bus 25 in processing module 24 correspond with the fiber optic cables of read bus 2 of RMU 1. The fiber optic cable of write bus 26 5 corresponds with one of the fiber optic cables of write bus 3 of RMU 1. As discussed above, the read bus 25 may be replicated to increase reliability. If it is, the replicated optical signals are passed through an optical combiner 27 and then a threshold enforcing receiver 28. Receiver 28 converts the optical signals to electronic signals. In addition, receiver 28 is threshold enforcing and 10 thus allows a majority of good optical signals to overwhelm a minority of erroneous optical signals. This is only possible if the optical signals are tightly synchronized, which they are because they are produced...

Reviews

A top quality publication along with the font used was intriguing to read. I really could comprehend everything using this written e ebook. Its been designed in an remarkably straightforward way and it is only after i finished reading through this publication by which basically altered me, modify the way i believe.

-- Cathrine Larkin Sr.

Very useful to all of group of people. I actually have read through and so i am certain that i will planning to study yet again once again down the road. I am just very easily can get a satisfaction of looking at a created book.

-- Mark Bernier
