RADIUM, VOL. 12: A MONTHLY JOURNAL DEVOTED TO THE CHEMISTRY, PHYSICS AND THERAPEUTICS OF RADIUM AND RADIO-ACTIVE SUBSTANCES; DECEMBER, 1918 (CLASSIC REPRINT) (PAPERBACK)**DOWNLOAD**

Forgotten Books, United States, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Radium, Vol. 12: A Monthly Journal Devoted to the Chemistry, Physics and Therapeutics of Radium and Radio-Active Substances; December, 1918 It has been found that papillomatous. Tumors, regarded as relatively benign on microscopic examination, are readily removed by fulguration through the cystoscope, while tumors regarded as frankly malignant on microscopic examination will not react to fulguration. Such tumors as fall in between these two groups may or may not react to fulguration. In the group of papillomatous tumors, when any doubt may exist as to their malignancy, the best method to ascertain the degree of malignancy is through their reaction to fulguration. If a tumor does not respond to three or four such treatments it may readily be concluded that it is of the malignant type and that suprapubic resection should be done without delay. Several patients have come under our observation in the past few years who had previously been subjected to repeated fulgurations - in the case of one as high as twenty - without affecting the bladder - tumor. This is particularly unfortunate. Since a tumor originally amenable to operation may become inoperable after the long delay and ineffectual treatment. Now that the type of tumor which may be destroyed by fulguration has been definitely established, the question arises: How permanent are the results of the removal of tumors by means of this method? On reviewing our records we find that there were 80 cases of bladder tumor fulgurated at the Mayo Clinic between January 1, 1911 and September 1, 1917. Of this number 50 were relatively benign papilloma. 1 were papilloma of questionable malignancy, 13 were carcinoma. 1 was angioma, and...
