

## Proceedings Volume 13-14

By Brooklyn Engineers Club

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1910 Excerpt: .Long Island. From this unit cost and the smallest storage development considered, 11000 mil. gal., it is evident that the minimum additional surface reservoir capacity would cost in the neighborhood of \$20 000 000. Even if the expense of open surface reservoirs of this type were not prohibitive they should be avoided, because of the large evaporation losses from their surface, the high temperature of the water stored in them in midsummer, the danger of pollution and the growths of organisms with the resulting tastes and odors that would occur. Fortunately, there is no necessity for embarking on such a project of developing surface storage, because there exists beneath the entire Eidgewood watershed a vast volume of natural storage in the pore spaces of the water-bearing strata that may be made available at a fraction of the cost of the surface storage. Indeed, the entire Eidgewood...
