

Report of a Board of United States Naval Engineers; On the Herreshoff System of Motive Machinery as Applied to the Steam-Yacht Leila, and on the Performance of That Vessel

Filesize: 2.2 MB

Reviews

This is the finest book i have got go through right up until now. I have got read and i also am confident that i am going to planning to read once again yet again in the future. You will not truly feel monotony at at any time of the time (that's what catalogs are for about if you check with me).

(Taylor Medhurst)

REPORT OF A BOARD OF UNITED STATES NAVAL ENGINEERS; ON THE HERRESHOFF SYSTEM OF MOTIVE MACHINERY AS APPLIED TO THE STEAM-YACHT LEILA, AND ON THE PERFORMANCE OF THAT VESSEL

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1881 Excerpt: .advantages. The weight of water vaporized per hour per square foot of heating surface is given for both the exterior and the interior surface of the coil pipe. Neither of these is the true expression, but of the two the weight of water vaporized per hour per square foot of the interior surface is much the nearest to the truth. Although the interior surface is in all cases the least gateway the heat has to pass through, and may therefore be supposed to be the proper measure, yet the difference of area of the corresponding surfaces between the outside and inside of the coil pipe, or tube, influences the difference of temperature of these sides, and therefore influences the rapidity with which the heat is transmitted from the fire side to the water side. When the fire is on the outside and the water is on the inside of the tube, measuring the efficiency of the heating surface by the interior surface of the tube makes such surface appear less efficient than in the case of the fire being on the inside and the water on the outside of the tube. The quantity of water experimentally vaporized is, for all the experiments, reduced to equality of feed temperature and of steam pressure for the purposes of accurate comparison; that is to say, from the experimental weight of water vaporized from the experimental feed temperature and under the experimental steam pressure, there is calculated what weight would...
