Repeating the operation, the root, more nearly approximated, - WO CHAPTER II. PULVERIZER.1 53--64. Rule: In the first place, as preparatory to the investigation of the pulverizer, the dividend, divisor, and additive quantity are, if practicable, to be reduced by some number. If the number, by which the dividend and divisor are both measured, do not also measure the additive quantity, the question is an ill put or impossible one.4 54--65--56. The last remainder, when the dividend and divisor are mutually divided, is their common measure. Being divided by that common measure, they are termed reduced quantities. Divide mutually the reduced dividend and divisor, until unity be the remainder in the dividend. Place the quotients one under the other; and the additive quantity beneath them, and cipher at the bottom. By the penult multiply the number next above it, and add the lowest term. Then reject the last and repeat the operation until a pair of numbers be left. The uppermost of these being abraded by the reduced dividend, the remainder is the quotient. The other or lowermost being in like manner abraded by the reduced divisor, the remainder is the multiplier.1 1 This is nearly word for word the same with a chapter in the L ilircitt / on the same subject. (Lil. Ch. 12.) See there, explanations of the terms. The method here taught is applicable chiefly to the solution of indeterminate problems that produce equations involving more than one unknown quantity....
