Iconcept Press, United States, 2014. Paperback. Book Condition: New. 254 x 203 mm. Language: English . Brand New Book ***** Print on Demand *****.Cancer is a broad group of diseases involving unregulated cell growth, in which cells divide and grow uncontrollably, forming malignant tumors, and invade nearby parts of the body. Cancer may also spread to different parts of the body through the lymphatic system or the bloodstream. The Research and Biology of Cancer discusses some recent advances in cancer research. There are totally two volumes: Volume I mainly discusses the role of some important enzymes and proteins in cancer, whereas Volume II discusses different types of cancers, including head and neck cancer, oral cancer, kidney cancer, colon cancer, and thyroid cancer. Chapter 1 discusses personalised combination therapy targeting PI3K/Akt, STAT3, ERK, and EGFR signalling pathways which may provide clinical benefits for patients with HNSCC. Such therapy is useful because molecular cross-talk between the EGFR and other RTK signalling pathways through PI3K/Akt, STAT3, and ERK in HNSCCs, EGFR inhibitors alone may be unable to suppress EGFR downstream. Chapter 2 describes tissue based LCM, which is a powerful technique that combines morphology, histopathology, and molecular biological analysis. The ability of LCM to retrieve specific populations of interested cells, combined with the analysis of gene sequencing and gene expression in these sub-population of cells, has made LCM an critical device in clinical and investigative oral oncology. Chapter 3 discussed several aspects about the use of the Micronucleus Test to identify genetic damage in individuals at higher risk of developing oral squamous cell carcinoma and evaluated the malignant transformation potential of precancerous lesions. Chapter 4 aims to picture the landscape of metastatic renal cancer starting from its pathogenesis, molecular markers, prognostic factors, metastatic potential, with emphasis on the recent evolution in the treatment...
